

I use a range of cutters as shown in the picture attached for flutes in spindles or face plate work; I use the core box cutters from 4 to 9.5m and for the Owls a 90 degree V cutter. They also do a range of cutters with an 8mm shank 100mm long (top left) I get my cutters from the company shown below they have a good range at reasonable prices. Hope this is of some help.

The most common I use are the;

Core Box

T403 3mm

T406.4 6mm / ¼"

T408 8mm

Point Round

T140

V Groove

T110
