

Turn a Sphere 100mm Dia (4") Then mark the centre points for the eyes at just over the radius of the Sphere 55mm

Draw two intersecting circles (approx. 60mm dia) on the centre points so they overlap by about 5mm . Next draw two more circles about 50 mm for the fluted part of the eye.

The Sphere can be held with a vacuum chuck or trapped between a wooden ring and backplate.

Drill an 8mm hole to accept the stem on the eye and the turn and flute each eye.
